DIGITAL IS NOW AFFORDABLE.

Durable. Versatile. Easy Migration to Digital.

ProTalk® NX-P500 DIGITAL TWO-WAY RADIO

**"I could not believe the money I
saved within only three years by
upgrading from analog to digital."**

*CFO
Retail Security Services*

Digital two-way radios offer the enhanced coverage, immediate connectivity and voice clarity retailers need to provide rapid and effective customer service. Until now, the advantages of digital radio communications came with a higher cost. With the KENWOOD NX-P500, digital is now affordable.

The KENWOOD ProTalk NX-P500 is the first two-way radio expressly designed to match ruggedness with enhanced digital performance at an attractive price.

UPGRADE TO DIGITAL FOR LESS THAN ANALOG

Upgrade or replace old analog radios with cutting-edge digital radios with expanded coverage, loud, clear audio and advanced features.

MEETS MILITARY SPECS FOR DURABILITY. RUGGED AND SUBMERSIBLE

The NX-P500 meets the highest military specifications for ruggedness and performance and the IP67 waterproof rating.

EASY MIGRATION TO DIGITAL

Operate in analog and migrate to digital on your schedule. **The second PTT button can be programmed to allow toggling between analog & digital channels.**

LIGHTWEIGHT, FLEXIBLE AND CUSTOMIZABLE

“Customers want retail to be fast, simple and efficient.”

*National Retail Federation
2018 Customer Channel Research*

Today's retail customers demand high service standards, a simple buying process and immediate access to adequate in-store stock. Equip your team with the NX-P500 so they can rapidly access inventory and pricing to serve customers quickly and perform at their best.

Designed for Convenience and Comfort – Two-way radios must be simple to use and comfortable to wear with versatile features. The lightweight NX-P500 has a built-in swivel belt clip so employees can wear it on their belt or work uniform. A second PTT can be programmed to toggle between analog and digital, or for direct response to a manager or specific team member. Managers can use this feature to call all team members with a single push of a button.

“36% of total retail shrinkage is due to shoplifting.”

*National Retail Federation
Security Retail Report 2018*

The NX-P500 is designed for quick, intuitive use, so a team member can easily report a theft in progress and the 750mW high quality audio makes sure their voice is heard.

Long-Lasting Performance - Featherweight and powerful lithium-ion battery technology locks in consistent performance for a full shift and renowned KENWOOD audio ensures audio quality in high noise retail environments. The unique 7-color LED bar on the NX-P500 makes it easy at a glance for staff and managers to see what channel is being used, battery status and more.

Stylish and Rugged Design – The NX-P500 meets durability standards without sacrificing aesthetics, integrating advanced features into a sleek and modern design. At 5.6 oz, it's lighter and slimmer than most digital radios and stylish enough to use in any retail environment.

DIGITAL FUNCTIONALITY, RESILIENCE AND UNIQUE FEATURES

The KENWOOD NX-P500 offers both analog and digital in one radio so you can migrate your operations to digital at your own pace or continue to use both analog and digital. Managers can designate channels to specific team members, making it simple to quickly toggle between floor and inventory staff to facilitate customer's requests or keep stock at optimum levels.

The typical two-way radio belt clip has been replaced in the NX-P500 with an integrated swivel latch clip for attachment to a uniform or to slip in a pocket, ready for unobtrusive and easily accessible use.

Program the integrated 7-light LED indicator to assign a specific color to a group, department, or individual for quick, at-a-glance identification of a caller. The proceed tone uniquely identifies transmission sources.

With up to 15.5 hours of talk time from powerful lithium-ion batteries, you can rely on the NX-P500 for long shifts. Charging and storage are simple with rapid charging and space-saving charging stations. Each radio comes with a charger and multiple unit chargers are available with the option to save space with wall-mounting, the capability to charge one to six radios at the same time or to charge a combination of extra batteries and radios.
